# A GREEN FUTURE

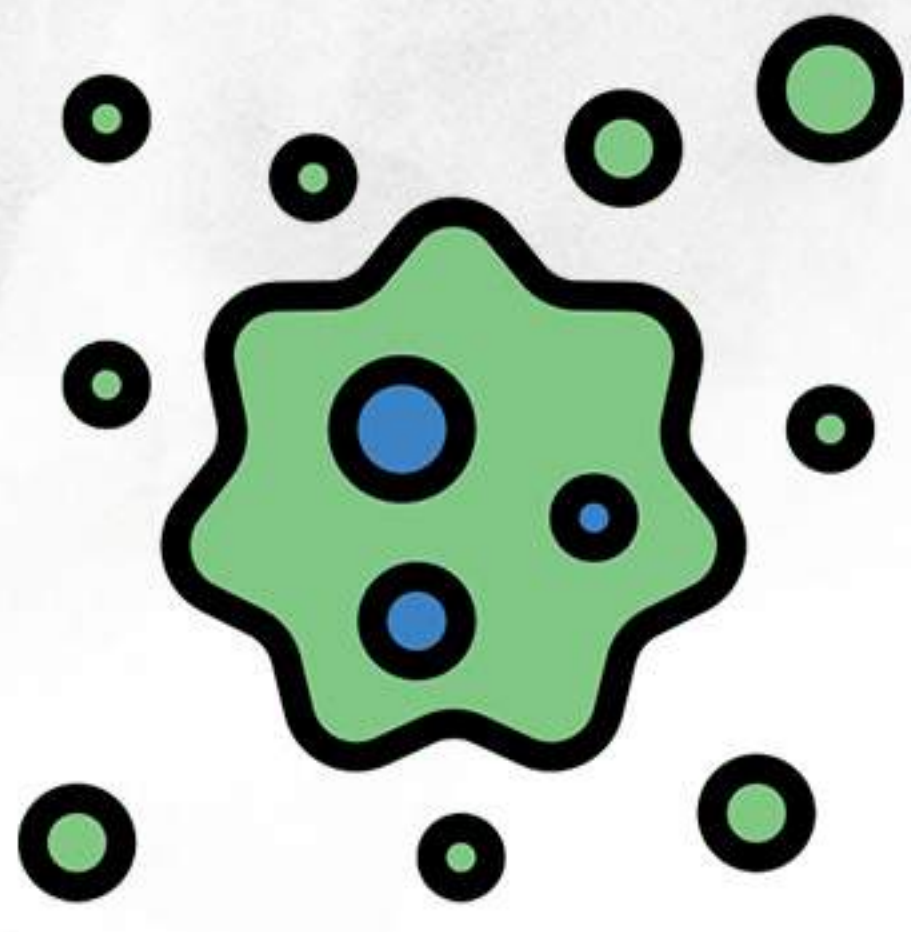

We offer you a natural and environmentally friendly insulation material. Made from a blend of goat hair and polyester fibre, this product stands out with its high UV resistance, breathability and high flame resistance. It also provides excellent insulation with its low thermal conductivity and high thermal resistance at a unit thickness.

This insulation material, which is an environmentally friendly option thanks to its natural goat hair content, saves space as it has a thinner structure compared to other insulation materials such as rockwool.

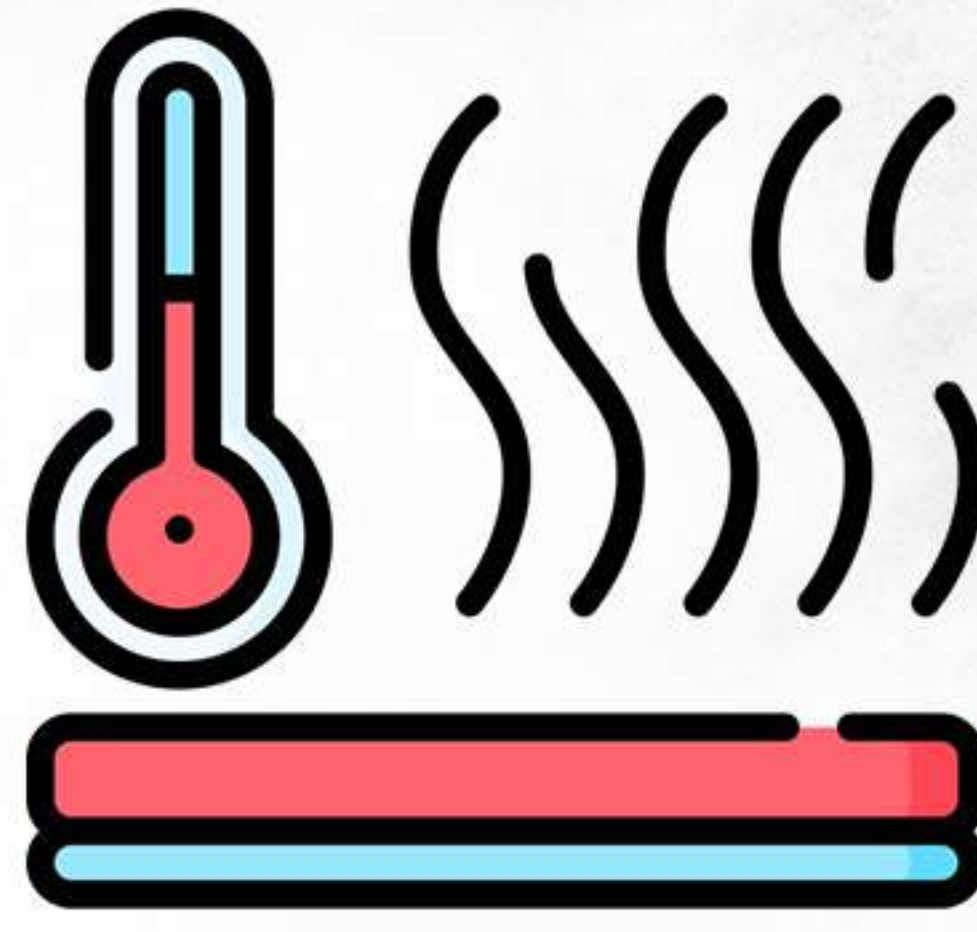

This insulation material, which is widely used in the construction industry, can be used in many areas such as roof and wall insulation. It is also used in many areas such as homes, workplaces, hospitals and schools. It is preferred by many people due to its high performance and environmentally friendly structure.

# MARTERM BENEFITS

Marterm offers an environmentally friendly and energy-efficient insulation material with its goat hair and polyester fibre blend. Thanks to its natural goat hair content, it provides high quality insulation without harming the environment and reduces energy costs by increasing energy efficiency. While creating a quiet and peaceful environment in your living spaces with its excellent sound insulation, it offers long-term use with its high UV resistance and flame resistance. It also protects the health of buildings and improves indoor air quality by providing humidity control. Make your living areas eco-friendly, comfortable and energy efficient with Marterm.

# Product Usage Areas

Goat Hair and Polyester Fibre Insulation Material: Versatile Insulation Solution

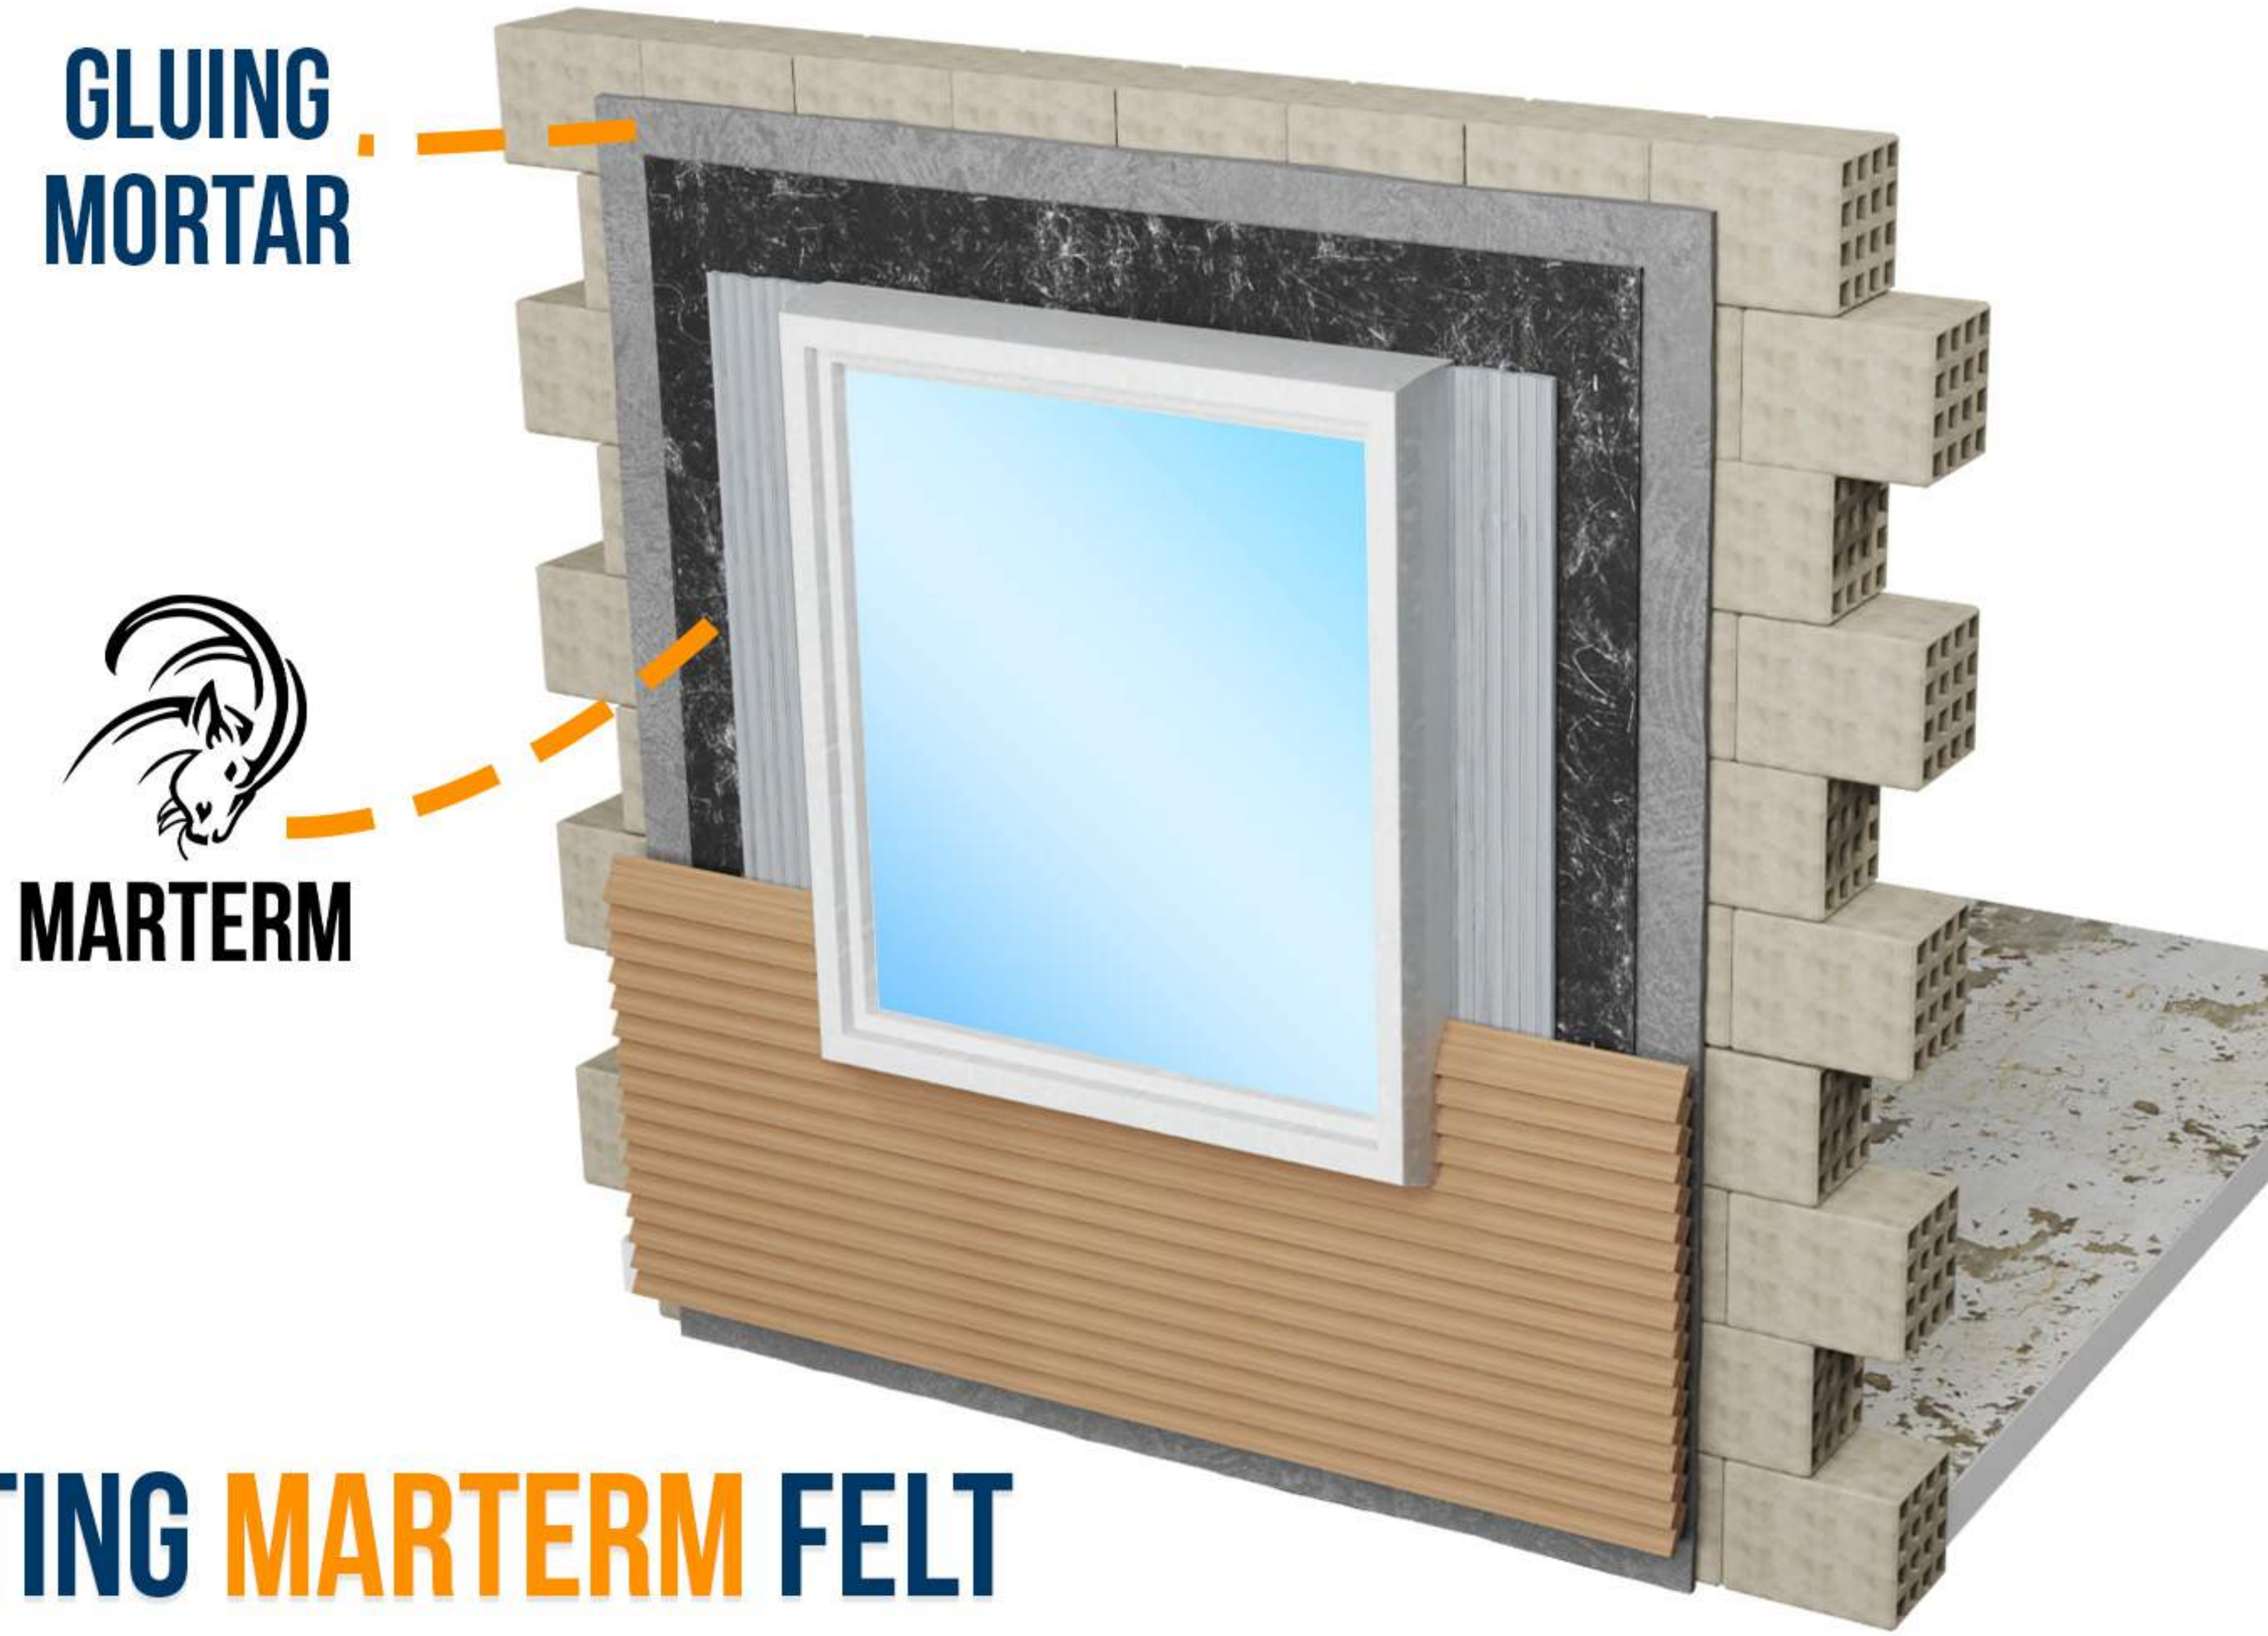

Produced from a mixture of goat hair and polyester fibre, this insulation material attracts attention with its wide usage areas and advantages. While it offers energy saving and thermal comfort in roof and wall insulation, it provides both heat and sound insulation in floors and ceilings.

This environmentally friendly material, which is preferred in places such as homes, workplaces, schools and hospitals, creates healthy and comfortable environments. This versatile insulation solution, which reduces costs with energy savings, will continue to have an important place in the insulation preferences of the future.
